

## ALL ABOUT the quilting bar

Use the quilting bar to sew straight lines up to 3" from the left needle position as desired. Just insert the bar into the slot (1) on the back of the needle bar and slide it to the position measured from the needle. Guide your fabric along the curved bar as you sew for topstitching, quilting, spacing between tucks or pin-tucks or any other sewing technique that needs an exact measurement.

**TIP**

*Tape a narrow piece of thin cardboard to the flatbed of the machine to use as a guide for spacing wider than 3". For projects that require a lot of straight stitched lines, marking the lines with a water- or air-soluble marking pen is another solution.*
